Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B B

Nucleic Acids Res. 28:4317-4331(2000).

-i- FUNCTION: CATALYZES THE FIRST STEP IN THE BIOSYNTHESIS OF

2-METHYLTHIO-N6-(DELTA(2)-ISOPENTENYL)-ADENOSINE (MS[2]1[6]A])

ADJACENT TO THE ANTICODON OF SEVERAL TRAN SPECIES (BY SIMILARITY).

-i- CATALYTIC ACTIVITY: Isopentenyl diphosphate + tRNA = diphosphate +

tRNA containing 6-isopentenyladenosine.

-i- SIMILARITY: BELONGS TO THE IPP TRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacillus halodurans.

-I- FUNCTION: CATALYZES THE FIRST STEP IN THE BIOSYNTHESIS OF 2-METHYLITHIO-N6-(DELTA(2)-ISOPENTENYL)-ADENOSINE (MS[2]I[6]A])

ADJACENT TO THE ANTICODON OF SEVERAL TRNA SPECIES (BY SIMILARITY).

-I- CATALYTIC ACTIVITY: Isopentenyl diphosphate + trna - diphosphate + tRNA containing 6-isopentenyladenosine.

-I- SIMILARITY: BELONGS TO THE IPP TRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fritz C., Fujita M., Fujita Y., Fuma S., Galizzi A., Galleron N.,

-! FUNCTION: Catalyzes the first step in the biosynthesis of 2-
methylthio-NG-(delta(2)-isopentenyl)-adenosine (MS[2][6]A])
adjacent to the anticodon of several tRNA species (By similarity).
-!- CATALYTIC ACTIVITY: Isopentenyl diphosphate + tRNA = diphosphate +

1. FUNCTION: Catalyzes the first step in the biosynthesis of 2-methylthio-NG-(delta(2)-isopentenyl)-adenosine (MS[2]I[6]A]) adjacent to the anticodon of several tRNA species (By similarity).

1. CATALYTIC ACTIVITY: Isopentenyl diphosphate + tRNA = dipho

1: FUNCTION: CATALYZES THE FIRST STEP IN THE BIOSYNTHESIS OF

2-METHYLTHIO.NG-(DELTA(2)-ISOPENTENYL)-ADENOSINE (MS[2]I[6]A])

ADJACENT TO THE ANTICODON OF SEVERAL TRNA SPECIES (BY SIMILARITY).

1: CATALYTIC ACTIVITY: Isopentenyl diphosphate + trna = diphosphate +

trna containing 6-isopentenyladenosine.

1: SIMILARITY: BELONGS TO THE IPP TRANSFERASE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Complete genomic sequence of Pasteurella multocida Pm70.";

Proc. Natl. Acad. Sci. U.S.A. 98:3460-3465(2001).

-- FUNCTION: Catalyzes the first step in the biosynthesis of 2-methylthio-N6-(delta(2)-isopentenyl)-adenosine (MS[2]I[6]A])

adjacent to the anticodon of several tRNA species (By similarity).

--- CATALYTIC ACTIVITY: Isopentenyl diphosphate + tRNA = diphosphate +

tRNA containing 6-isopentenyl diphosphate FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-JUN-2002 (Rel. 41, Last sequence update)
